Mr. Stephen Cast General Manager Wellborn Special Utility District 4118 Greens Prairie Road College Station, TX 77845

Re: Water Cost of Service and Rate Design Study

Mr. Cast:

NewGen Strategies & Solutions, LLC is pleased to provide Wellborn Special Utility District with the enclosed report summarizing our findings and recommendations from the water cost of service and rate design study.

We appreciate the opportunity to assist Wellborn Special Utility District in this engagement. In addition, we would like to acknowledge the excellent assistance we received from your staff. Without their support, this project could not have been completed. Please contact us if you have any questions concerning this report.

Sincerely,

NewGen Strategies and Solutions, LLC

Section 1 INTRODUCTION

Wellborn Special Utility District (Wellborn) retained NewGen Strategies and Solutions, LLC (NewGen) to develop a comprehensive cost of service and rate design study to ensure the financial sustainability of the utility.

Background

Wellborn currently provides service to approximately 9,000 residential and 62 commercial retail connections.¹ To serve its customers, Wellborn owns and operates a number of groundwater wells and a surface water treatment plant. Wellborn also has purchase water and wheeling contracts with the City of Bryan, the City of College Station, and the Brazos River Authority.

Current Rates

Table 1-1 lists the current minimum bill, or fixed charges, for retail services. Consistent with industry best practices, the fixed charge is higher for larger meter sizes to reflect the ability of larger meters to demand exponentially more water from the system.

Table 1-1
Current Fixed Charges

Meter Size	Monthly Charge
Standard Meter Size	\$ 29.00
1 – inch Meter	58.00
1 ½ – inch Meter	145.00
2 – inch Meter	232.00
3 – inch Meter	522.00

Table 1-2 lists the current inclining block rate structure and rates for retail services. The current rates' absence of an allowance for "free" water is consistent with industry best practices and Texas Water Development Board best management practices for water conservation. Further, the inclining block rate structure sends a strong price signal to avoid water waste and extend the adequacy of Wellborn's existing water capacity.

² Texas Water Development Board, Water Conservation Best Management Practices, Best Management Practices for Municipal Water Users, November 2013, Page 26.

¹ Estimated number of connections in 2021

Table 1-2
Current Volumetric Charges

Rate Blocks (in gallons)	Volumetric Rate (per 1,000 gallons)
0 - 2,000	\$ 3.55
2,001 - 10,000	3.85
10,001 - 20,000	4.30
20,001 - 30,000	4.80
30,001 - 40,000	5.95
40,001 - 50,000	6.65
> 50,000	7.35

Section 2 REVENUE REQUIREMENT

The revenue requirement was developed based on a cash needs basis, inclusive of operations and maintenance (O&M) costs, debt service, cash capital funding, and contributions to reserves, as needed. This requires an evaluation of the various financial obligations of the utility and the means to fund these obligations. This section of the report discusses various components of the revenue requirement.

Revenue Requirement

NewGen reviewed historical financial results from prior years and developed a "Test Year" for the study based on the FY 2022 approved budget. A Test Year is a common term in rate studies that refers to an adjusted budget that is used as a basis for setting rates. The Test Year should be representative of "typical" conditions, with adjustments for any unusual or one-time expenses. Furthermore, any projected non-recurring expenses or revenues are identified and removed. The development of the Test Year is shown in Schedule 2.

The Test Year was used to develop a five-year revenue requirement forecast for FY 2023 through FY 2027. The revenue requirement identifies the amount that should be recovered from rates in order to fully recover the cost of providing service. In addition to the Test Year, the revenue requirement forecast relies on inflation factors, a capital improvement plan, debt service, and reserves obligations. The five-year water revenue requirement forecast is provided in Schedule 3. Table 2-1 shows a summary of the revenue requirement forecast. Note the revenue requirement peaks in FY 2024. This is due to a balloon payment on the Series 2021 Revenue Note.

Table 2-1
Revenue Requirement Forecast

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027
Revenue Requirement	\$ 9,101,507	\$ 11,670,323	\$ 9,924,601	\$ 10,292,470	\$ 10,589,237
Year-Over-Year Change		28.2%	-15.0%	3.7%	2.9%

Inflation Factors

The Test Year revenue requirement was used as the basis for the five-year financial forecast. Certain expenses were directly identified (i.e., not inflated but, rather, based on a set payment schedule), such as debt service payments. However, the majority of expenses were O&M related costs, which were inflated based on historical averages, industry standards, or staff input as shown in Table 2-2. The more significant increases in FY 2023 are reflective of expectations for costs next year as compared with costs in the FY 2022 Budget.

Table 2-2 Inflation Factors

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027
General Salary	5.00%	4.00%	4.00%	4.00%	4.00%
Benefits	5.00%	3.00%	3.00%	3.00%	3.00%
Chemicals	8.00%	4.00%	3.00%	3.00%	3.00%
Utilities	4.00%	3.00%	3.00%	3.00%	3.00%
General	3.00%	3.00%	3.00%	3.00%	3.00%
Supplies	5.00%	5.00%	5.00%	5.00%	5.00%
Repair & Maintenance	8.00%	4.00%	3.00%	3.00%	3.00%
Administrative Fees	3.00%	3.00%	3.00%	3.00%	3.00%
Fuel	15.00%	3.00%	3.00%	3.00%	3.00%
Services	3.00%	3.00%	3.00%	3.00%	3.00%
Credit Card Processing	3.0%	3.0%	3.0%	3.0%	3.0%
Professional Fees	3.0%	3.0%	3.0%	3.0%	3.0%
Capital Projects	8.0%	4.0%	4.0%	4.0%	4.0%
OSR Revenue	0.0%	-33.3%	-50.0%	-100%	0.0%

Capital Spending

Wellborn has a capital improvement plan that envisions spending approximately \$55 million on capital improvements over the next five years. The majority of this cost will be funded from the proceeds of a 2022 debt issue. However, there will also be the need to fund a portion of this cost from cash reserves and/or cash from rates. The revenue requirement assumes approximately \$1.65 million per year will be funded from rates.

In addition to the capital spending associated with the capital improvement plan, the revenue requirement also includes depreciation expense. While depreciation is a non-cash item, and the revenue requirement was developed on the cash needs basis, the inclusion of depreciation is intended to account for annual capital renewals and replacements on the system to keep the system in good working condition. This includes capital projects not contemplated within the capital improvement plan, such as routine replacement of equipment operating beyond its estimated useful life. This would also be the presumed source of funding for required line relocations. NewGen would stress the importance of properly funding capital renewals and replacements to prevent system failures and expensive emergency repairs.

Debt

The revenue requirement includes Wellborn's existing debt and the associated principal and interest payments. The current annual principal and interest payments are approximately \$3.3 million for FY 2023, but peak at approximately \$5.5 million in FY 2024. The principal and interest schedule for each dent issue over the next five years is shown in Schedule 4.

Wellborn does not plan to fund any new capital improvement projects through the issuance of debt over the five-year forecast period. The revenue requirement assumes approximately \$2.2 million per year of debt service will be paid for from the proceeds of impact fees, reducing the obligation for existing ratepayers. Finally, the 2022 debt issue has an obligation to fund a reserve. The revenue requirement includes approximately \$0.55 million per year to fund this required reserve.

New Personnel

Based on direction by staff, NewGen planned for new personnel costs over the five-year forecast. This includes a new operator in FY 2023, a new operator in FY 2024, and a new office administration position in FY 2025. The costs associated with these new positions are shown in Schedule 1.

Revenue Offsets

In order to isolate the revenues that are required to be recovered through rates, it is necessary to subtract other miscellaneous utility related revenues. The revenue offsets align with the budgeted values in the FY 2022 budget, and remain constant throughout the five-year forecast, to be conservative. Examples of these revenue offsets include revenues from serving City of Bryan customers in the OSR area, non-standard service to the Union Pacific Railroad, tower leases, and other miscellaneous revenues. Revenues from the OSR area are forecasted to decrease over time and cease by FY 2026.

Section 3 COST OF SERVICE BY CLASS

Customer Classes

Wellborn currently has only one set of rates applicable to all customers. However, there are commercial customers in addition to residential customers on Wellborn's water system and these two groups place different demands on the water system. As a group, the residential customers have a greater peak-to-average month consumption ratio than commercial customers, as shown on Schedule 9. The peak-to-average month consumption ratio is simply the maximum month consumption for the year divided by the average monthly consumption for the year. The higher the ratio, the more the class is relying on extra capacity in the system to meet their water demands. The residential customers presumably have a higher peak-to-average month consumption ratio due to proportionally greater irrigation demands in the summer as compared with commercial customers.

Base-Extra

Under the Base-Extra methodology, the revenue requirement can be allocated to base costs, extra capacity costs, and customer costs. Base costs represent the cost of providing service to customers under average load conditions, without the cost incurred to meet peaks in demand. Extra capacity costs represent the cost of meeting peak-demand rate-of-use requirements in excess of average (base) use. Customer costs represent costs associated with serving customers, irrespective of water use.

The previously developed revenue requirement was allocated to these three categories based, in part, on the daily water production data shown in Schedule 7, which was used to calculate a peaking ratio³ for the water system. The allocation of each line-item in the revenue requirement is shown in Schedule 8, and the results are shown in Table 3-1.

Table 3-1
Base-Extra Revenue Requirement

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027
Base	\$ 4,667,488	\$ 5,895,270	\$ 5,102,369	\$ 5,297,989	\$ 5,461,369
Extra	4,262,281	5,605,369	4,638,351	4,805,436	4,934,170
Customer	171,738	169,683	183,882	189,046	193,698
Revenue Requirement	\$ 9,101,507	\$ 11,670,323	\$ 9,924,601	\$ 10,292,470	\$ 10,589,237

As shown on Schedule 10, the base, extra, and customer costs can be allocated to customer classes. The result of this allocation is shown in Table 3-2.

³ The peaking ratio is based on maximum day water production divided by the average day water production.

Table 3-2 Revenue Requirement by Customer Class

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027
Residential	\$ 8,876,438	\$ 11,382,473	\$ 9,678,959	\$ 10,037,612	\$ 10,326,869
Commercial	225,069	287,850	245,643	254,859	262,368
Revenue Requirement	\$ 9,101,507	\$ 11,670,323	\$ 9,924,601	\$ 10,292,470	\$ 10,589,237

Section 4 PROPOSED RATES

Proposed Retail Rates

Wellborn charges for water service based on a monthly fixed charge and increasing volumetric rates associated with increased water consumption, as discussed in Section 1. The fixed charges currently increase with meter size based on flow capacities for standard meter types. Wellborn's volumetric rates currently have multiple tiers, or blocks, wherein a customer pays more, per 1,000 gallons of consumption, as more water is consumed and the customer moves from one tier to a higher tier associated with increased consumption.

The current and proposed fixed charges are shown in Table 4-1. The proposed fixed charges recover nearly 50 percent of the overall revenue requirement, leaving the remaining portion of the revenue requirement to be collected through the volumetric charges.

Table 4-1
Current and Proposed Fixed Charges

Meter Size	Current	Proposed
	Fixed Charge (per month)	
Standard Meter Size	\$ 29.00	\$ 37.50
1 – inch Meter	58.00	75.00
1 1/2 – inch Meter	145.00	187.50
2 – inch Meter	232.00	300.00
3 – inch Meter	522.00	675.00

As shown in Table 4-2, the proposed rates introduce a new tier of consumption from 50,001 gallons to 90,000 gallons per month. Further, the proposed rates reflect different volumetric rates for residential customers as compared to commercial customers. The volumetric rates for the commercial customers are similar in structure to the current rate tiers, but all consumption in excess of 40,000 gallons per month is charge the same volumetric rate under the proposal. This is an accommodation in recognition of the fact that the commercial customers, as a group, do not place as significant peak demands on the water system compared with their average monthly demands (i.e., lower peak-to-average month consumption ratio).

The volumetric rates for the residential customers are similar in structure to the current rate tiers, except the proposed rates reflect a new tier for consumption between 50,001 gallons to 90,000 gallons per month and then a new rate for consumption above to 90,000 gallons per month. The rationale for the new delineation at 90,000 gallons is loosely based on irrigation limits. There are a small number of residential customers using a disproportionate amount of water for irrigation, which represents a significant proportion of the utility's peak demand. The levels of water consumption represented by this group of residential customers is at odds with the utility's watering restrictions, which limit irrigation to two days per week for eight hours per day under the drought contingency plan. Consumption in excess of 90,000 gallons per month suggests excess irrigation even allowing for a generous amount of indoor

water use. Thus, the new rate for consumption in excess of 90,000 gallons is intended to send a stronger pricing signal to these residential customers to avoid water waste and comply with watering restrictions.

It is important to note that the proposed volumetric rates assume perfectly inelastic demand. The level of response to price increases are difficult to quantify. Thus, the revenue forecast assumes customers will not change consumption behavior in response to the proposed rates. However, as shown in Table 4-3, the proposed rates are forecasted to slightly over-recover the revenue requirement in all years except FY 2024, which has a balloon debt payment. Thus, the proposed rates have a small amount of buffer to absorb some limited reduction in water demand in response to the proposed rates.

Table 4-2
Current and Proposed Volumetric Charges

		_
Rate Blocks (in gallons)	Current	Proposed
Residential	Volumetri (per 1,000 g	
0 - 2,000	\$ 3.55	\$ 4.40
2,001 - 10,000	3.85	4.80
10,001 - 20,000	4.30	5.30
20,001 - 30,000	4.80	6.10
30,001 - 40,000	5.95	7.00
40,001 - 50,000	6.65	8.10
50,001 - 90,000	7.35	9.30
> 90,000	7.35	14.00
Commercial		
0 - 2,000	\$ 3.55	\$ 4.40
2,001 - 10,000	3.85	4.80
10,001 - 20,000	4.30	5.30
20,001 - 30,000	4.80	6.10
30,001 - 40,000	5.95	7.00
40,001 - 50,000	6.65	7.70
50,001 - 90,000	7.35	7.70
> 90,000	7.35	7.70

Projected Revenue Recovery

If the proposed rates are implemented and effective as of January 1, 2023, the proposed rates are projected to fully recover the revenue requirement in each year over the five-year forecast period except in FY 2024, as shown in Table 4-3. The over recovery, if it materializes, may be used by the utility to bolster financial reserves or cash fund capital projects, reducing future borrowing costs. A more detailed account of the revenue projection is provided in Schedule 11.

Table 4-3
Projected Revenue Recovery Under Proposed Rates

	Proposed Rates								
	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027				
Projected Rate Revenue	\$ 9,538,385	\$ 9,812,188	\$10,094,668	\$10,385,824	\$10,685,658				
Revenue Requirement	9,101,507	11,670,323	9,924,601	10,292,470	10,589,237				
Over / (Under) Recovery	436,878	(1,858,135)	170,067	93,354	96,421				

Bill Impacts

The bill impacts for residential customers with a standard meter under various consumption assumptions are shown in Schedule 12. These impacts are summarized in Table 4-4.

Table 4-4
Residential Bill Impacts

Consumption	Current	Proposed	Increase
2,000 gallons	\$ 36.10	\$ 46.30	\$ 10.20
5,000 gallons	47.65	60.70	13.05
10,000 gallons	66.90	84.70	17.80
30,000 gallons	157.90	198.70	40.80
100,000 gallons	651.40	861.70	210.30

Notes:

However, depreciation is a surrogate for the cash capital investment necessary to make renewals and replacements on the water system to keep it in good working condition.

Test Year does not explicitly include emergency or infrequent costs, such as radio repairs or un-reimbursed cost of moving lines, but these may be addressed via reserves

⁽¹⁾ Depreciation and Amortization are non-cash expenses (and this analysis reflects a cash basis revenue requirement)

⁽²⁾ Interest expense has been moved to the "Debt Service" section of the revenue requirement

⁽³⁾ Reflects revenue for serving City of Bryan customers in the OSR area

⁽⁴⁾ The BVGCD Fee is a pass-through expense (and revenue is recorded as a contra-expense).

⁽⁵⁾ Debt service is as defined on the relevant schedules

⁽⁶⁾ This is the amount the analysis is intended to calculate (i.e., what is required from rates)

⁽⁷⁾ Bulk sales are excluded to be conservative as they can be unreliable

⁽⁸⁾ Impact fee and interest income are assumed to accrue in reserves, rather than offset revenue requirements

⁽⁹⁾ Revenue from non-standard service to the Union Pacific Railroad
